ELECTRONIC SPEED CONTROLLERS

Electronic speed controllers ERV..B (230V)

Electronic speed controllers ERV ..B are used to change rotation speed by changing supply voltage of motor without overheat external connection. The regulation of the motor rotation speed is stepless from the set minimum inside of controller up to the full supply voltage on the controllers output. The controller has minimum speed setpoint inside. The hard start time setpoint inside of the controller. The start from the maximum rotating speed with the time delay to set one with a potentiometer. If the setpoint is 0, the controller will start in the soft mode – minimum to maximum. Controllers ERV..B have overheat protection function.
